

Customer Behavior Analysis – Business Problems

This document contains business-focused analytical questions used in the Customer Behavior Analysis project. These problems were solved using SQL, Python preprocessing, and Power BI visualization.

1. Which category generates the highest revenue?

Analyze total revenue generated by each product category to identify the most profitable business segment.

2. Are discounts increasing the purchase value?

Compare purchase amounts between discounted and non-discounted transactions to determine the effectiveness of discounts.

3. Total revenue generated by male and female customers

Evaluate revenue contribution across gender groups to understand purchasing behavior differences.

4. Which customers used a discount but still spent more than the average purchase amount?

Identify high-value customers who used discounts while still purchasing above-average order values.

5. Which are the top/bottom 5 products with the highest average review rating?

Analyze customer satisfaction by identifying products with the best and worst average review ratings.

6. Average purchase: Standard vs Express shipping

Compare average spending behavior between customers using standard and express shipping methods.

7. Do subscribed customers spend more?

Compare average spend and total revenue between subscribed and non-subscribed customers.

8. Top 5 products with highest discount usage percentage

Determine which products are most frequently purchased using discounts.

9. Segment customers into new, returning, and loyal customers

Classify customers based on previous purchases and analyze the count of each customer segment.

10. Are repeat buyers (more than 5 previous purchases) spending more?

Analyze whether repeat customers contribute higher revenue compared to occasional buyers.

11. What is the revenue contribution of each age group?

Evaluate how different age groups contribute to overall business revenue.

These business problems help organizations understand customer behavior, improve decision-making, optimize marketing strategies, and increase revenue.
